SOUTH DAKOTA BIRD NOTES, the official publication of the South Dakota Ornithologists' Union, is sent to all members whose dues are paid for the current year. Life membership: \$400; Family Life membership (one subscription to *Bird Notes*): \$500; Sustaining membership: \$40; Regular membership: \$20; Family membership (one household; one subscription to *SD Bird Notes*): \$25; Junior/Student membership: \$10; Library Subscription: \$30. Single and back copies: Members, \$5; non-members, \$6. All dues, contributions, and orders for back copies should be sent to the SDOU Treasurer, Rosemary Draeger, 528 E. Lotta St., Sioux Falls, SD, 57105. Manuscripts for publication and change of address notices should be sent to Douglas Chapman (3108 S. Holly Ave., Sioux Falls, SD, 57105) or preferably, e-mailed to: sfbirdclub@sio.midco.net. **SDOU website: www.sdou.org**.

DECEMBER 2012

NO. 4

SOUTH DAKOTA ORNITHOLOGISTS' UNION

Officers 2012 - 2013

President Nancy Drilling Rapid City, SD
Vice President Ricky D. Olson PO BOX 622, Fort Pierre, SD 57532
Secretary David Swanson USD, Vermillion, SD 57069
Treasurer Rosemary Draeger 2520 E. Whisper Trail, Sioux Falls, SD 57108
Editor Douglas E. Chapman 3108 S. Holly Ave., Sioux Falls, SD 57105
Librarian..... Jeffrey S. Palmer DSU, Madison, SD 57042

Elected Directors

For Term expiring 2013: Douglas Chapman, Sioux Falls; Marie Curtin, Custer; Nancy Drilling, Rapid City; Gene K. Hess, Rapid City; and Mark Schmidtbauer, Sioux Falls.
For Term expiring 2014: Jennifer Fowler, Rapid City; Kent Jensen, Brookings; Ron Mabie, Pickstown; Duane Weber, Custer; and Mick Zerr, Sioux Falls.
For Term expiring 2015: Bill Bossman, Pierre; Roger Dietrich, Yankton; Linda Johnson, Sioux Falls; Ricky Olson, Ft. Pierre; and Mark Otnes, Fargo, ND.

Past President Directors

Jocelyn L. Baker, Addison Ball, L.M. Baylor, Gilbert Blankespoor, Rosemary Draeger, Ken Graupmann, Bruce Harris, Nelda Holden, Todd M. Jensen, Jeffrey S. Palmer, Rex Riis, Robb Schenck, Dennis Skadsen, David Swanson, Dan A. Tallman, J. David Williams.

STANDING COMMITTEES OF SDOU:

Membership Committee: Anna Ball, Bob Bork, Linda Johnson (chair), Mark Schmidtbauer.

Nathaniel R. Whitney, Jr. Memorial Research Grants: Todd M. Jensen (chair), Linda Johnson, Duane Weber.

Rare Bird Records: Todd M. Jensen, Ricky D. Olson, Jeffrey S. Palmer, David Swanson (chair), J. David Williams.

Scholarships and Awards: Jocelyn L. Baker (chair), Nelda Holden, Galen Steffen.

PRESIDENT'S PAGE

As we look forward to the new year, consider making a New Year's pledge to become a citizen scientist. A citizen scientist is a volunteer who collects data to answer real world questions. In South Dakota, we have so few people and even fewer professional bird researchers, that any contribution you make will help increase our knowledge of South Dakota's birds. It's interesting, it's fun, and it's rewarding. Here are some ideas where your participation can make a huge difference.

1. Collect data for an organized effort – Christmas Bird Counts (see sdou.org for dates of CBC near you), Project Feederwatch (runs through April), Great Backyard Bird Count (Feb. 15 -18, 2013), eBird, the SDOU online database, and Breeding Bird Surveys (summertime) are all projects where thousands of small contributions from volunteers helps answer big questions. You just write down what you see and turn the information in.
2. Help a local researcher – there are many surveys and research projects being conducted in the state and some could use your help. Contact your local federal or state agency, university, or bird club to volunteer.
3. Rare bird sightings – if you see a rare bird, take notes! Research the history of that species in the state. If it stays around, keep taking notes. See this issue's article on the Harlequin Duck in Rapid City for an example of how much we can learn.
4. Turn your bird notes into inquiries – have you been noting first and last sightings of species in your yard or making trip lists? Your notes have a wealth of great data. For example, have first or last dates changed over the years? Have some species declined or disappeared over the years while others have appeared or increased?
5. Analyze someone else's data – much data is online and just waiting for someone to use it to answer some of these questions. You can download data for your area from the SDOU online database, eBird, the Christmas Bird Count, and Breeding Bird Survey, to name a few.
6. Make in-depth observations of birds in your area – for example study the nesting ecology and behavior of a species nesting near you, note feeding behavior at the bird-feeder, or competition between species at the bird bath.
7. Start a small research project of your own - visit a natural area or good bird area and document all of the species there in a particular season, start a nestbox program, start a hawkwatch, or monitor a threatened species or waterbird colony.

The next step is to let the rest of the world know the results of your inquiries. SDOU provides two channels for this – oral presentations at the Fall meeting and publication in South Dakota Bird Notes. Other clubs in the state, such as bird and garden clubs and Audubon chapters, would love to have you come and talk about your findings too.

Anyone who watches birds, from backyards to remote corners of the state, can help researchers better understand birds and their habits. Participate, sponsor, and support efforts in the state to better understand our birds!

Nancy Drilling

HARLEQUIN DUCK (*HISTRIONICUS HISTRIONICUS*)

AT RAPID CITY, WINTER 2011-2012

Jocelyn L. Baker, Lynn E. Barber, and Gene K. Hess

Canyon Lake, located on the extreme western edge of Rapid City, is a twenty-seven acre body of water. Though small in size, when compared to other lakes, it provides waterfowl with open or partially open water throughout the winter regardless of temperatures. This is due to two factors. Rapid Creek flows into the lake's northwest corner, creating turbulence. Also, Cleghorn Springs Fish Hatchery, located a short distance upstream, provides a steady stream of warmer water into Rapid Creek. Thus, waterfowl that would ordinarily migrate to southern wintering grounds remain at the lake throughout the winter. For many years, until 2009, one to three Barrow's Goldeneyes (*Bucephala islandica*) wintered at the lake (Baker and Hess 2012). Over the years twenty-four waterfowl species have frequented the lake from November through March.

On 15 December 2011, a small dark duck with a small bill and white facial markings was observed by Baker in the northwest corner of the lake. The duck's behavior caught her attention immediately as it was feeding by swimming and diving upstream in the creek and then floating downstream into the lake, repeating that behavior often. This behavior was reminiscent of sea ducks. The duck was observed until 4:15 p.m. when it could no longer be seen very well due to approaching darkness. In checking a field guide Baker immediately noted that it was either an immature or a female Harlequin Duck (*Histrionicus histrionicus*).

The next morning, Barber, Hess and several other Rapid City birders, joined Baker at the lake at 7 a.m. and under better light conditions identified the duck as a female Harlequin Duck. Baker, Hess, and Barber conduct a bird survey weekly at Canyon Lake and thus observed it multiple times during the succeeding weeks. In addition to those sightings, Baker observed it almost daily as she checked to see if it still was present at the lake. The last date of observation was 7 April 2012. Observers were able to note gradual plumage changes.

BEHAVIOR AND PLUMAGE OBSERVATIONS

When the Harlequin Duck was observed early on the morning of 16 December, the day after it was first found, it had a classic female Harlequin Duck plumage (Figure 1). Slightly larger than a Bufflehead (*Bucephala albeola*), the dark blackish-brown Harlequin Duck had a round white spot behind the eye, a small area of buffy white on each side of the bill extending to a smaller buffy area above the bill (Figures 2 – 3), and spotted grayish-tan underparts. It was diving underwater in the shallow flowing water at the entrance of Rapid Creek into Canyon Lake, then flying upstream twenty to forty feet, and drifting back down, periodically diving underwater in the same manner as the nearby Buffleheads. A few times the Harlequin Duck stood on a small stone in the creek, preened and then resumed swimming and diving. By mid-morning the Harlequin Duck had flown upstream several hundred feet and was floating among Mallards (*Anas platyrhynchos*), only sporadically diving.

Nearly every early morning after that, as dawn arrived, the Harlequin Duck could be found at the creek entrance diving among the Buffleheads as before. Later in the day, it could

be found upstream, or if not there, then usually at the opposite (southern) side of Canyon Lake, often out in the middle away from the shore with other ducks. This was particularly the case on weekends or mild weather days when there were many people in the park and the disturbed ducks left the shore for the safety of the lake center.

For the first two months after its arrival at Canyon Lake, the plumage and behavior of the Harlequin Duck were basically unchanged and it was still being recorded on the observation sheets as a female duck. But in mid-February, its plumage was showing increased white facial areas and a somewhat darker overall face color around the white markings. Careful review of numerous field guides in comparison to observations and photographs of the Canyon Lake Harlequin Duck led to the conclusion that the winter visitor to Canyon Lake was a male Harlequin Duck, a first year bird, apparently molting from its juvenile plumage.

As the weeks progressed, so did the gradual increase in the Harlequin Duck's facial markings, with the areas on the side of the bill becoming snow-white, a white line growing upward on each side of its crown, a new white slash appearing on each side of the nape and another on each side in the scapular area (Figures 4 – 7).

The bird's behavior did not change as its appearance changed. As the days grew warmer and some of the wintering ducks departed, including many of the Buffleheads with which it had usually appeared, the Harlequin Duck was often found near the stream edges, diving near Mallards and Gadwalls (*Anas strepera*). When the Mallards flew upstream in mid-morning and the lower stream emptied of ducks, the Harlequin Duck often followed, joining the Mallards where they landed. One morning, when there were no ducks or geese around other than the Harlequin Duck, a honking Canada Goose (*Branta canadensis*) landed some 100 feet from the creek. The Harlequin Duck rapidly swam out into the lake to join the goose. When a few Mallards came near the creek, the Harlequin Duck left the side of the goose and joined the ducks. Rarely was the Harlequin Duck seen by itself.

Just before the Harlequin Duck disappeared in early April, its facial markings were distinct and white on an overall darker gray-black face, with a dark area appearing on each flank with slight rusty tinges toward the rear (Figure 8).

RECORDS AND DISTRIBUTION

There are five South Dakota records prior to the Canyon Lake record and all have occurred in the eastern or central parts of the state (Table 1). All six occurrences have been in the fall and winter. Only the 2003-2004 bird was present as long as the Canyon Lake bird (119 and 116 days respectively).

Harlequin Ducks breed from western Alaska, the Pacific Northwest to central Idaho, western Wyoming and in the east "from southern Baffin Island south to central western and eastern Quebec and eastern Labrador, possibly also Newfoundland..." (AOU 1998). They winter along the North American Pacific coast from the "Pribilof and Aleutian islands south to central (rarely southern) California" and on the Atlantic coast "from southern Lab-

rador, Newfoundland, and Nova Scotia south to New York (Long Island) less commonly to the Great Lakes, casually farther inland to Nevada, Montana, northern New Mexico, Nebraska, Missouri, Tennessee, and West Virginia, on the Atlantic coast to Florida, and on the Gulf coast from western Florida to southeastern Texas...” (AOU 1998). It is a “...rare but regular species...” in Minnesota and “...North Dakota has at least 14 verified records...” (Tallman et al. 2002). The occurrence of Harlequin Ducks in South Dakota fits this pattern of vagrancy.

The nearest breeding area is west of South Dakota in northwest Wyoming and southwest Montana. Thus the shortest distance the Canyon Lake bird may have come from is the southern and eastern part of its breeding range, and it flew east instead of west. The second most likely scenario is that the bird again flew east instead of west but from a more northwesterly part of the Harlequin Duck breeding grounds. Lastly, and perhaps least likely, it may have come from the Atlantic population and it flew southwest instead of south.

What factors might have contributed to this individual spending the winter at Canyon Lake? Young Harlequin Ducks typically accompany their mothers to the coastal wintering grounds, so this bird was somehow separated from its mother. Harlequin Ducks breed along fast flowing mountain streams, often in forested areas and winter primarily along rocky coasts in rough or turbulent waters. Rapid Creek, before entering Canyon Lake, flows through a wooded corridor, and contains patches of rocky areas that create some turbulence particularly where the creek enters the lake. Perhaps this sufficiently resembled appropriate habitat to satisfy an inexperienced bird.

Harlequin Ducks dive to feed mostly on aquatic invertebrates, roe, and to a lesser extent small fish found in riverine and marine habitats (Rosenberg and Rothe 2007). Judging from the large number of mayflies seen at the lake throughout the 2012 summer there must have been plenty of food available through the winter. Also small fish possibly escape from or are released from the Cleghorn Springs Fish Hatchery located 200 – 300 meters upstream from Canyon Lake. Such escapees would offer another source of food.

CONCLUSION

Canyon Lake is one of the few, perhaps only, lakes in the region to remain at least partially open throughout the winter. During the period November through March for the winters of 2008 – 2011 the maximum ice cover recorded during weekly surveys was 90 percent. Most weeks the ice cover was substantially less than that. This open water provides scarce safe nighttime roosting areas for waterfowl. The presence of a ready food supply is also a contributing factor to birds remaining in the area. Given the relative lack of other safe nighttime roosting areas and the presence of other waterfowl in the area it should not be surprising that wandering waterfowl having found Canyon Lake choose to remain for the winter. This and a passing similarity to Harlequin Duck wintering habitat may explain the bird's presence at Canyon Lake.

FLEDGLING TRACTS

JASON THIELE

Birding Resolutions for the New Year

The Old Year, 2012, is drawing to a close. For me, it was a very good birding year. I had the good fortune to spend significant amounts of time birding in three different states this year—South Dakota, North Dakota, and, currently, Wisconsin. My travels have given me the chance to bird in a lot of different habitats and see a nice variety of species without having to work particularly hard to find them. Although 2012 ranks as perhaps the best birding year I've had in five years of serious birding and many more years of casual bird observation, I see no reason why 2013 can't be even better. And since this is the time of the year when many people are making "New Year's Resolutions," I think it is appropriate to make some birding resolutions for 2013.

1. Find more species this year than I did the year before.

I don't mean this one in a sense of accumulating a larger list of species than I did in 2012. As I said before, I did a lot of moving around in the past year, which made it relatively easy to see a lot of birds. I don't expect to move in 2013, so I will be much more restricted in the area that I will be able to cover.

What I do want to improve on is the number of species that I identify on any given trip. Every birder misses a bird occasionally, no matter what his/her skill level, but I feel that I can reduce the number of birds that go unidentified. I've always had a fairly attentive eye, and I'm continually improving in my ability to recognize songs, but I have a lot to learn about identifying birds by "chip notes" and flight calls. Occasionally I see a post on a birding listserv during spring or fall migration by a person who picked up a variety of species flying overhead at night by listening for flight calls. I'm a long way from being able to do that, but it would be great to reduce the number of "blackbird sp." that I record because I can pick out the call of a Brewer's or Rusty flying overhead in bad light, or to recognize an uncommon warbler species calling from deep within some shrubbery while the more abundant species distract me. (That's not to say that I mind being distracted by a mixed flock of common warblers; it would just be nice to not walk past my nemesis Connecticut Warbler, as I've probably done before because I didn't recognize its call note and stop to look for it.) Winter will be a good time to study bird recordings.

2. Continue to learn about bird behavior.

In the fall issue of *SD Bird Notes* I wrote that actually watching birds is my favorite part of birding. I spend a lot of time reading about birds and their behaviors, but I always learn more by watching them. 2013 will be no exception. I want to learn all I can, and I'd like some more good material for future columns!

3. Spend more time birding with others.

I did a lot better at this one in 2012, but I still spent at least 90% of my birding excursions flying solo. Still, I know that I will become a better birder if I do spend

a little more time in the field with some fellow birders. I learn so much from other birders, both directly and indirectly, and it's always fun to be around other people who appreciate nature. I'm in a good place to find some companions, as Wisconsin has a fairly extensive birding community, and the Wisconsin Society for Ornithology offers a lot of field trips each year. I'm looking forward to that. Naturally, a trip back to South Dakota for at least one of the SDOU meetings is probably in order for 2013.

4. Buy a spotting scope.

This is probably the first time I've ever made a New Year's resolution to spend more money, but I think it will be worth it. Anyone who spends even half the time that I do looking for birds probably has a scope already. And shorebirds are among my favorite birds, which makes it even more of a mystery why I don't own a scope yet. It will be nice to leave fewer birds unidentified due to distance.

5. Learn the gulls.

I am clueless when it comes to many of the gulls. The plumage differences seem so subtle among some species, and the various age classes add to the difficulty. I love a challenge, but I have to admit to just not being that interested in gulls, which has held me back from really studying them. However, the fact that I am now able to make a day trip to two of the Great Lakes and have good chances to see a variety of gull species definitely gives me an incentive to do some gull-watching, especially this winter. If I follow through on my #3 and #4 resolutions, learning the gulls should be much easier.

6. Bird more by bike.

In 2008 and 2009, I used pedal power to reach a lot of my birding destinations. It certainly helped that I lived in places with good systems of biking trails, but I could have relied on my car a lot less than I have in the last couple of years as well. In 2013, I plan to reduce my carbon footprint in my birding travels, and I'm positioned quite well to do so here along the Mississippi River in southwestern Wisconsin. I've read that several Wisconsin birders did a BIGBY (Big Green Birding Year) in 2012, counting the number of species that they could see within walking, biking, or canoeing/kayaking distance of their home in one year. 2013 sounds like a good scouting year for me.

7. Get someone else hooked on birding.

As always, I'm looking to introduce others to this fascinating hobby. Southwestern Wisconsin is a well-known hotspot for Bald Eagles during the winter months, and I'm guessing the eagles attract many people who have a casual interest in birds, but aren't really birders. I hope I can encounter some of these eagle watchers and get them interested in the other winged critters.

8. I'd like to hear about your Birding Resolutions for 2013.

Wishing you many life birds in 2013!

SEASONAL REPORTS

The 2012 Summer Season

Compiled By: Jeffrey S. Palmer
01 June 2012 to 31 July 2012

College of Arts & Sciences
Dakota State University
Madison, SD 57042

The primary goal of the Summer Season compilation is to report Confirmed Breeding records observed during the season. There were 182 species reported as Confirmed Breeding this year; however, this does not include numerous records reported to the current South Dakota Breeding Bird Atlas Project. These will eventually be reported elsewhere and the data will hopefully make its way into the online database as well. The secondary objectives of the Summer Season summary include sightings of rare (or at least infrequently reported) species, late spring and early fall migration dates, and species that are reported from unusual locations. There were 276 species, including 6 rarities, reported during the season. The ten-year (2002-2011) average is 258. A full listing of all reported sightings can be obtained from the online database. This report contains those sightings and species which seemed to be consistent with the objectives of the Summer Season as described above.

Trumpeter Swan Confirmed Breeding: 29 Jun Meade (PY) ND ... also reported 10 Jun Tripp RDO; 11 Jun Fall River BJU; 13 Jun Fall River BJU; 01 Jul Fall River BJU; 12 Jul Tripp ND

American Wigeon Confirmed Breeding: **10 Jun Fall River (PY) BJU; 01 Jul Fall River (PY) BJU; 07 Jul Walworth (PY) BJU; 17 Jul Dewey (PY) BJU**

American Black Duck All Reports: 05 Jun Clark BJU; 07 Jun Edmunds GO

Cinnamon Teal reported 03 Jun Fall River DS, JSP; 06 Jun Hughes RDO; 11 Jun Fall River BJU; 17 Jun Brown BJU

Green-winged Teal Confirmed Breeding: **01 Jul Fall River (PY) BJU; 07 Jul Walworth (PY) BJU; 19 Jul Corson (PY) BJU**

Canvasback Confirmed Breeding: **12 Jul Shannon (PY) ND**

Redhead Confirmed Breeding: 21 Jun Codington (PY) BJU; **25 Jun Beadle (PY) BJU; 25 Jun Clark (PY) BJU; 01 Jul Fall River (PY) BJU; 19 Jul Dewey (PY) BJU; 23 Jul Charles Mix (PY) BJU**

Lesser Scaup Confirmed Breeding: 17 Jun McPherson (PY) BJU; 22 Jun Day (NE) BJU; **23 Jul Charles Mix (PY) BJU**

Bufflehead All Reports: 15 Jun Perkins BJU; 16 Jun Perkins BJU

GOLDEN-CROWNED SPARROW IN SIOUX FALLS 12 – 17 OCTOBER

Mick Zerr, Sioux Falls

Those who have a bird-friendly yard are always hopeful for a rare or unique bird to show up at their feeders. In the past 15 years the National Wildlife Federation Backyard Habitat # 20922 on Crestwood Road in Eastern Sioux Falls has had more than a few uncommon guests (including a Wood Thrush and a Northern Shrike), but both were one-day wonders. So it was exciting to share a Carolina Wren which appeared on 30 September 2007 and stayed until January 2008, as many birders got a chance to see him. Little did we know that our latest unique guest would top our Carolina friend substantially.

On the morning of Friday, 12 October 2012, I was observing some recent migrant arrivals (a Pink-sided Junco, Lincoln's, Clay-colored and Song sparrows) as they feasted on the ground among the 25+ resident House Sparrows. Over time, I have learned to watch for any sparrow that is scratching with its feet, and not its bill, as this is an indication that the bird is not a House Sparrow. I noticed three scratchers, two of which turned into beautiful White-throated Sparrows but a third bird kept its back to me. It did not look like a White-throated from that angle. It more resembled a female House Sparrow, but it kept scratching and was aggressive to the House Sparrows that came close. Finally it turned around, and I noticed a bi-colored bill and a possible black line on the side of its head. Suddenly the sun got high enough to shine on the birds, and the top of the mystery bird's head sparkled in gold. My mind said it must be the White-crowned Sparrow that was here last week with a weird sun reflection. I grabbed the camera, took a few shots and continued to eye him with binoculars. The gold coloration was no fluke and was rimmed by black all around; the eyes had a white ring on the lower lid only, and the breast was brownish with some light streaking. Could it possibly be a Golden-crowned Sparrow? A quick look into National Geographic's new sixth edition field guide showed my bird was a young adult male GCSP. No way was I going to post this until I got some verification, so I sent a photo to Doug Chapman, and called him before he looked at it. I could read his mind saying, "No way!" but when he saw the photo, there was no doubt. He confirmed it straight away.

Thus began six days of sharing "Goldie" with eager birders from near and far. His routine was to feed on the ground (millet), get a drink at the bird bath, and twice, to take a long bath in the shallow part of the goldfish pond. The bath was the highlight of his show, and at least

three birders got to observe it from a distance of fifteen feet. In the evening, he would eat around 6:00 pm, get a drink, and retire to the bushes. As Saturday was a scheduled outing for the Sioux Falls Bird Club, the participants came over to see it – only to miss it. A few birders came back after the field trip and the bird quickly appeared. E-mails and phone calls from birders as far as Rapid City, Minneapolis and Des Moines asked for directions to see the bird. In all, 24 people that I know of, from three different states, came to see the bird. Of those, six did not see it. Most sad was Jocelyn Baker and Nancy Drilling from Rapid City who arrived ten minutes after the bird made his final appearance on Wednesday, 17 October. The ladies waited most of the day and again Thursday morning, but it was the beginning of 50 mph winds, and the bird must have taken advantage of the wind to move along.

Many photographers took photos. My photos and a video posted on <Flickr.com> have been viewed by over 436. We wish "Goldie" luck in joining his fellow Golden-crowned in their normal wintering territory on the West Coast. It is interesting to speculate how he wound up in South Dakota. It was indeed a treat to have such a beautiful visitor, but more of a treat to be able to share this rarity with other birders.

This bird was South Dakota's third record of Golden-crowned Sparrow. The previous two records are: 5/10/95, Lake Co. and 11/5/99, Meade Co.

Golden-crowned Sparrow records from surrounding states are as follows.

North Dakota: 6/14/34 Wilton Co.; 10/10/92 Sawyer; 5/16/95 CSNWR; 11/9/96 thru 03/97 CSNWR; 05/14-15/01 Bismarck; 05/04-07/04 NewTown; 5/1-2/08 (1) Ward Co. (Corey Ellingson, pers. comm.)

Minnesota: 29 April 1987, Chippewa Co.; 11/11/89 - 2/18 Feb/90, St. Louis Co.; 12/2701 - 5/1/02, Cook Co.; 4/28 - 5/6/08, Cook Co.; 10/16-18/08, Cass Co.; 12/20/08 - 4/02/09, St. Louis Co.; 3/25-30/09, Dakota Co.; 4/19/12, St. Louis Co.; 4/20/12, Sherburne Co. (Anthony Hertzell, pers. comm.)

Iowa: 3-7 May 1977, Guthrie Co.; Early May 1995, Hamilton Co.; 25 Jan-15 Feb 2005, Winneshiek Co., (Ann Johnson, pers. comm.)

Montana: "Fewer than 20 records" (Larry Weeks, pers. comm.)

Wyoming: Buffalo area, Latilong 5; Dubois area, Latilong 9; Split Rock, Latilong 18; Goshen Co., Latilong 21. (Jean Adams, pers. comm.)

Nebraska: 5/1-4/08, Knox Co.; 5/4/07, Sioux Co.; 4 additional reports in the period 3/17-5/14 none documented, but all likely correct; 11/25-26/84, Alliance; 12/3/99 near Brownlee; 12/18/98 immature, Harlan Co.; McPherson Co., 1966. (Ross Silcock, pers. comm.)

Colorado: There are 6 records from the northeastern Colorado plains (Andrews and Righter 1992; Andrews et al 2002). (Nathan Pieplow, pers. comm.)

HOTSPOTS

RICKY D. OLSON

The best bird of the fall season had to be the **Golden-crowned Sparrow** at Mick Zerr's residence in Sioux Falls, 12-17 October [see article p. 96]. I would like to thank Mick for allowing people to view this great yard bird.

All three scoter species have been reported this fall, unlike last year when they were very scarce. There are also several reports of Red-throated and Pacific loons, culminating in the sighting of a Yellow-billed Loon at Oahe tailrace on 12 November.

A Great Black-backed Gull has been observed at Pierre late October through mid-November. A Little Gull was reported from Fort Randall Dam 10-19. Sabine's Gulls were seen at Gavin's Point Dam. As always the Missouri River dams are the Hotspots for waterfowl and gulls in the fall season.

A Common Raven was observed briefly flying upriver near Pierre 13 November.

It appears the upcoming winter season will be good birding for many seasonal migrants. Red Crossbills, Common Redpolls, Snow Buntings and Bohemian Waxwings have already been reported in numbers.

BOOK REVIEW

DAN TALLMAN

Bird Watcher's Bible: A Complete Treasury. Jonathan Alderfer, Ed. (2012) National Geographic: Washington DC. 400 pp. Hardcover \$40.00

This fascinating book is aimed at beginning to intermediate birders. It would make a great holiday gift for a young person just beginning to show interest in birds. While not quite the “complete treasury” of “science, know-how, beauty, and lore” as hubristically noted on the cover, the book does present a competent, well-written, and entertaining introduction to birding.

The color photographs in this book will inspire would-be birders to take to the field. Two especially caught my eye. A Black Skimmer, in silhouette only, leaving a trail of splashing water behind its elongated lower mandible, is exquisite. Another stunner is a close-up of a Peregrine Falcon carrying a still-alive Willet.

The book is edited by Jonathan Alderfer and contains seven chapters written by several authors. The paragraphs that follow give an extremely brief and non-comprehensive review of some of what is covered in these chapters.

Chapter 1, “The Anatomy of a Bird,” by Kimball Garrett, gives a superficial discussion of avian anatomy and physiology. For example, two bird skeletons are illustrated but none of the bones are labeled. The book is full of odd lists. The list in this chapter is the completely subjective “Top 12 birds with the Best Plumage.” How can you limit the world's most beautiful birds to 12?

Chapter 2, “Birds through the Ages,” is by Catherine Herbert Howell. She takes us from ancient Egypt and aboriginal America to the mid-1900s. Along the way we meet such subjects as a pet starling that mimicked Mozart's music and a pigeon that won a medal in World War II.

Chapter 3, “The Life of A Bird,” is by Kimball Garrett and discusses avian development and ecology. Included in this chapter are descriptions of the “top 10 amazing bird nests.” Courtship and eggs are also discussed, as are birds that have adapted to the human landscape.

Chapter 4, “Science Discovers the Bird,” also by Catherine Howell, talks about paleontology, banding and tracking, and human commercial use of birds. Another of those lists names the top 10 most common bird blogs. My blog is not listed (sniff). Art as science is an odd discussion that takes the reader through Peterson but omits any living bird artist. This book includes an abundance of antique bird

illustrations. A few of these golden-oldies are fine, but such numbers supplant space that could have been used to showcase more modern artists. Finally a few current avian studies are recounted in “Breaking News.”

Chapter 5 is called “To be a Birder”. Curiously the author is not cited. Two pages are devoted to National Geographic’s *Birds of North America*. Had this really been a birder’s Bible, other current field guides would have also been highlighted. Optics and birding hotspots are described. A sort of out of place chart of bird body parts is also included here.

Chapter 6, by Scott Weidensaul, briefly discusses the mechanics of flight and migration. You can read about flyways, weather and fallouts, as well as banding and telemetry. As you might guess, there is a list of the “top 10 long-distance migration champs.”

Chapter 7, again without author citation is about attracting birds. Beginning birders will learn about “food and feeder basics,” bird houses (complete with a martin house design), attracting hummingbirds and bluebirds, and even a list of the “top 10 birds that live in bird houses.” Water features are mentioned, followed by pages on landscaping in the Northeast, Southeast, Northwest, Southwest, but not in the Midwest. The chapter includes a discussion of Citizen Science.

Finally comes Scott Weidensaul’s “**Birdographies**.” This chapter consists of a relatively poorly illustrated list, but does include a paragraph about each of Scott’s favorite birds. The book ends with a short list of further reading. I’ll end this review by asking my readers to guess the 10 top-grossing films about birds. Hint: *The Big Year* is not among them. The answer is in yet another list in this book.—*Dan Tallman, Northfield MN 55057*
